

## Multiple Long-Term Condition Clustering:

Investigating socioeconomic inequality in the impacts of MLTC clusters on hospital admissions among older adults living in England

UCL Department of Epidemiology and Public Health

Jess Kurland

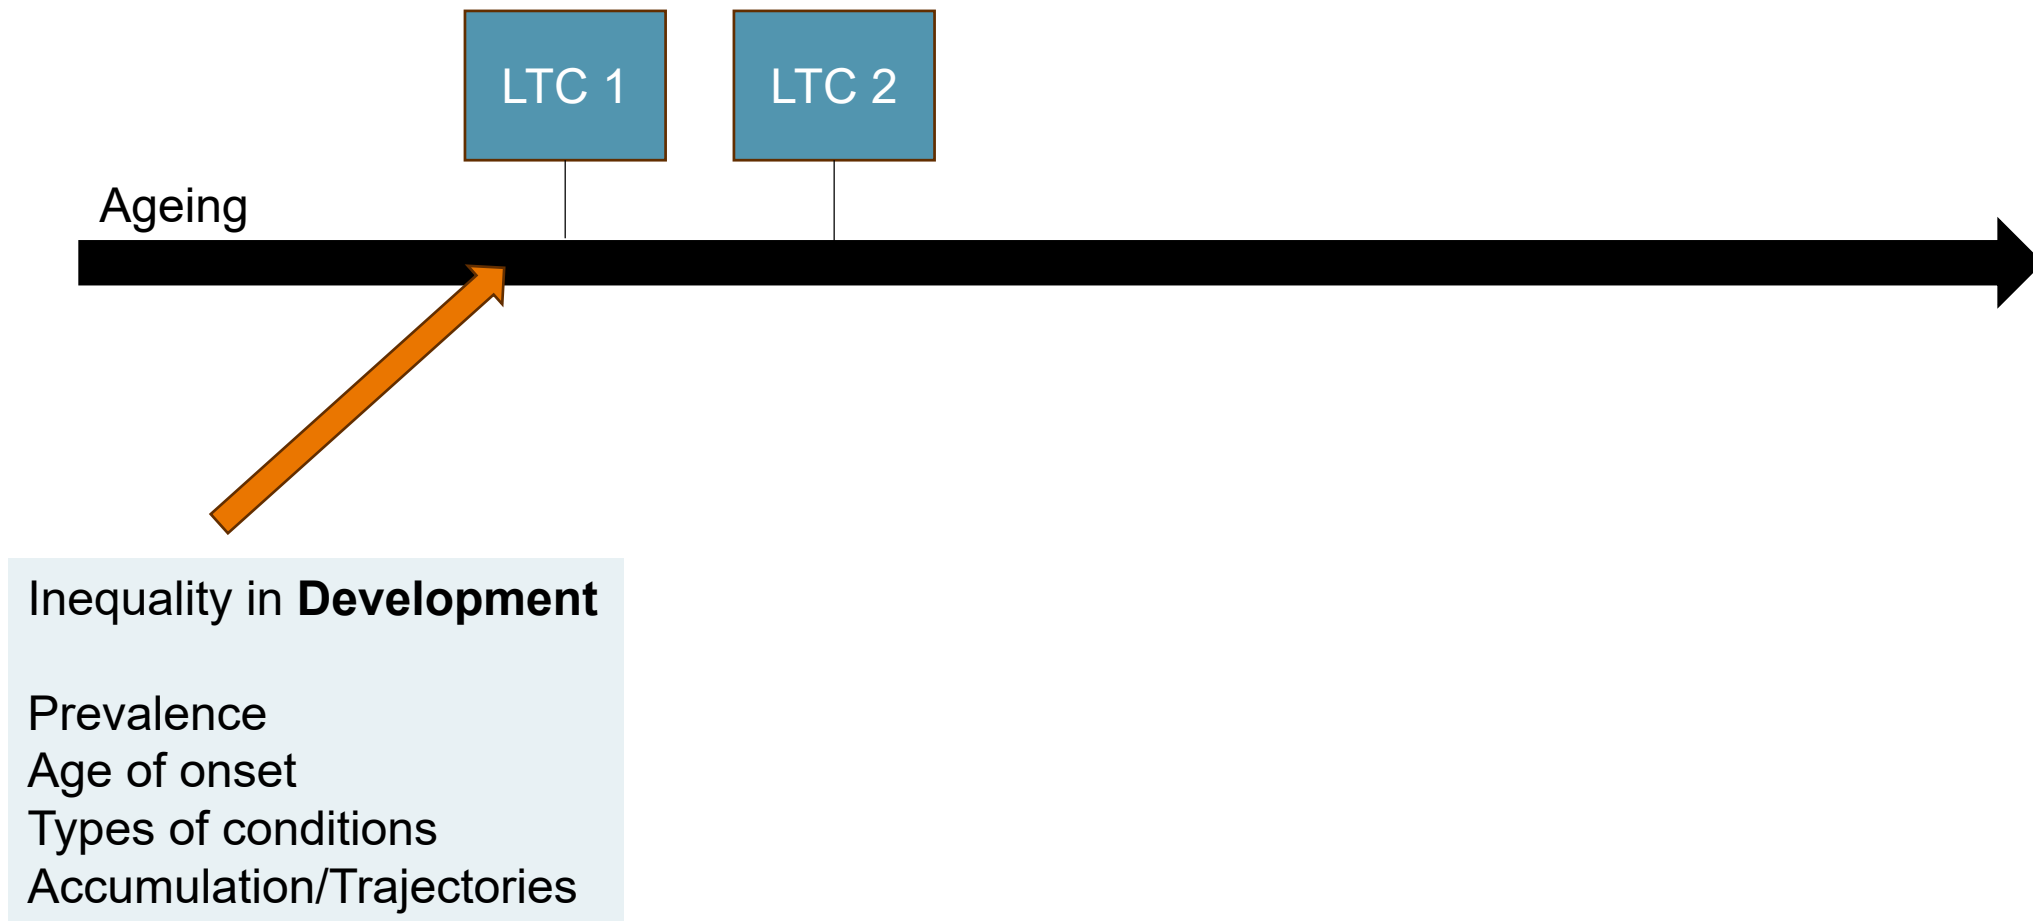

Professor Paola Zaninotto, Professor Anne McMunn, Dr Mai Stafford & Dr Francesca Cavallaro

A complicated network... more than the sum of its parts

# What about socioeconomic influences?

# **Socioeconomic Inequality in Impacts**

## **Current Evidence**

# **Socioeconomic Inequality in Impacts**

## **Current Evidence**

Three types of inequality in the impacts of MLTCs

# Socioeconomic Inequality in Impacts

## Current Evidence

Three types of inequality in the impacts of MLTCs

1. **Cumulative** – Impacts of MLTCs and social factors add together

# Socioeconomic Inequality in Impacts

## Current Evidence

Three types of inequality in the impacts of MLTCs

1. **Cumulative** – Impacts of MLTCs and social factors add together
2. **Multiplicative** – Social factors exacerbate impacts of MLTCs

# Socioeconomic Inequality in Impacts

## Current Evidence

Three types of inequality in the impacts of MLTCs

1. **Cumulative** – Impacts of MLTCs and social factors add together
2. **Multiplicative** – Social factors exacerbate impacts of MLTCs
3. **Levelling** – MLTCs level out inequality in impacts

# Socioeconomic Inequality in Impacts

## Current Evidence

Three types of inequality in the impacts of MLTCs

1. **Cumulative** – Impacts of MLTCs and social factors add together
2. **Multiplicative** – Social factors exacerbate impacts of MLTCs
3. **Levelling** – MLTCs level out inequality in impacts

Results differ due to data, population, and methodological differences  
(especially how MLTCs are defined and measured!)

# Research Aims

# Research Aims

1. Group older adults into distinct and clinically meaningful clusters based on their LTCs

# Research Aims

1. Group older adults into distinct and clinically meaningful clusters based on their LTCs
2. Investigate the impacts of these clusters on secondary care use and mortality

# Research Aims

1. Group older adults into distinct and clinically meaningful clusters based on their LTCs
2. Investigate the impacts of these clusters on hospital admissions
3. Explore socioeconomic inequality in the impacts of clusters

# Data

# Data

English Longitudinal Study of Ageing (ELSA)

A nationally representative cohort study of community dwelling older adults (50+) in England (N=9886)

# Data

## English Longitudinal Study of Ageing (ELSA)

A nationally representative cohort study of community dwelling older adults (50+) in England (N=9886)

## Hospital Episode Statistics (HES)

Linked NHS hospital admission data 2008 (baseline) – 2018 (N=7908)

11,433 **emergency** admissions

26,659 **elective** admissions

# Methods

# Methods

- What patterns of MLTCs are present in the data?  
Latent Class Analysis (LCA), 20 LTCs

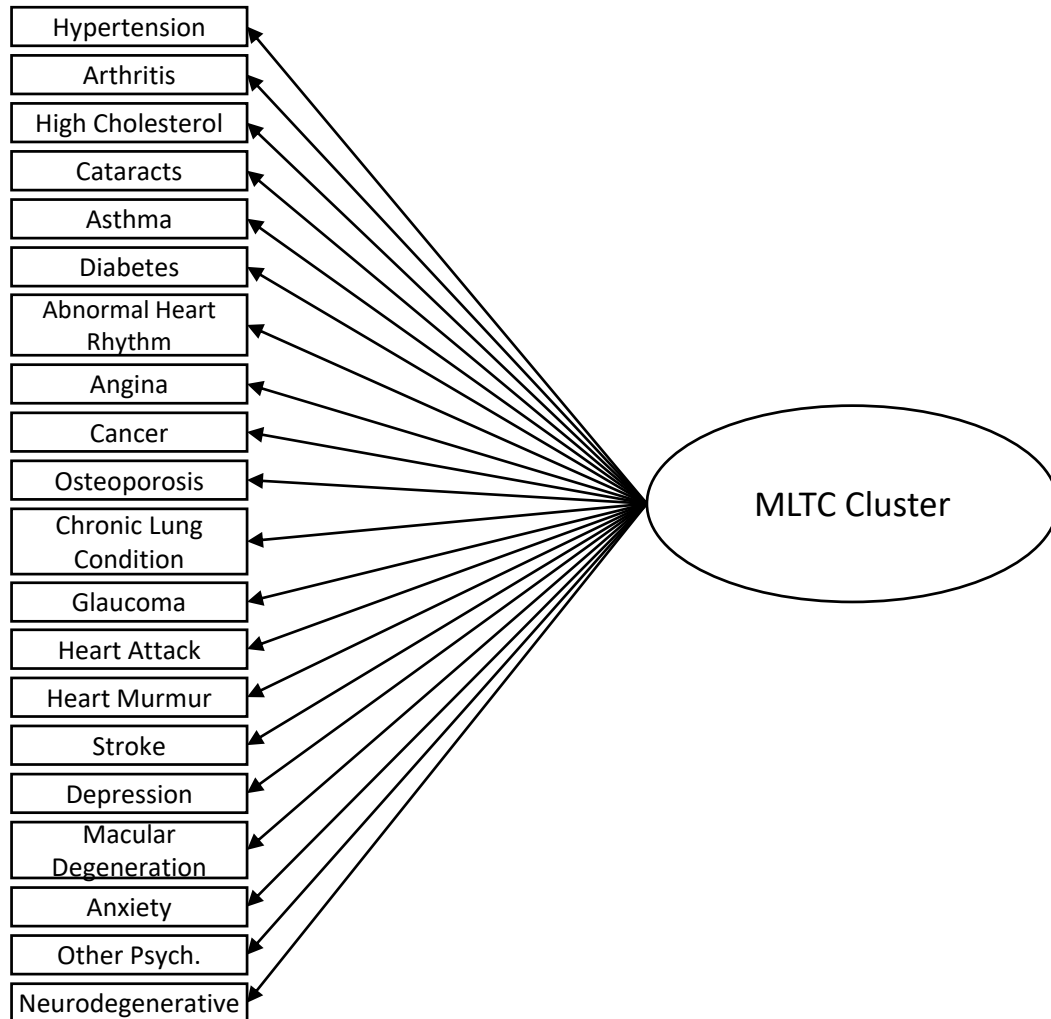

# Methods

- What patterns of MLTCs are present in the data?  
Latent Class Analysis (LCA), 20 LTCs
- How are clusters associated with hospital admissions (elective and emergency) and mortality?  
Negative Binomial Regression Models  
Cox Proportional Hazards Regression

# Methods

- What patterns of MLTCs are present in the data?  
Latent Class Analysis (LCA), 20 LTCs
- How are clusters associated with hospital admissions (elective and emergency) and mortality?  
Negative Binomial Regression Models  
Cox Proportional Hazards Regression
- Does socioeconomic position modify these relationships?  
Consider interactions between wealth and cluster  
Stratify analysis by wealth (household level)

# Latent Class Analysis

# Latent Class Analysis

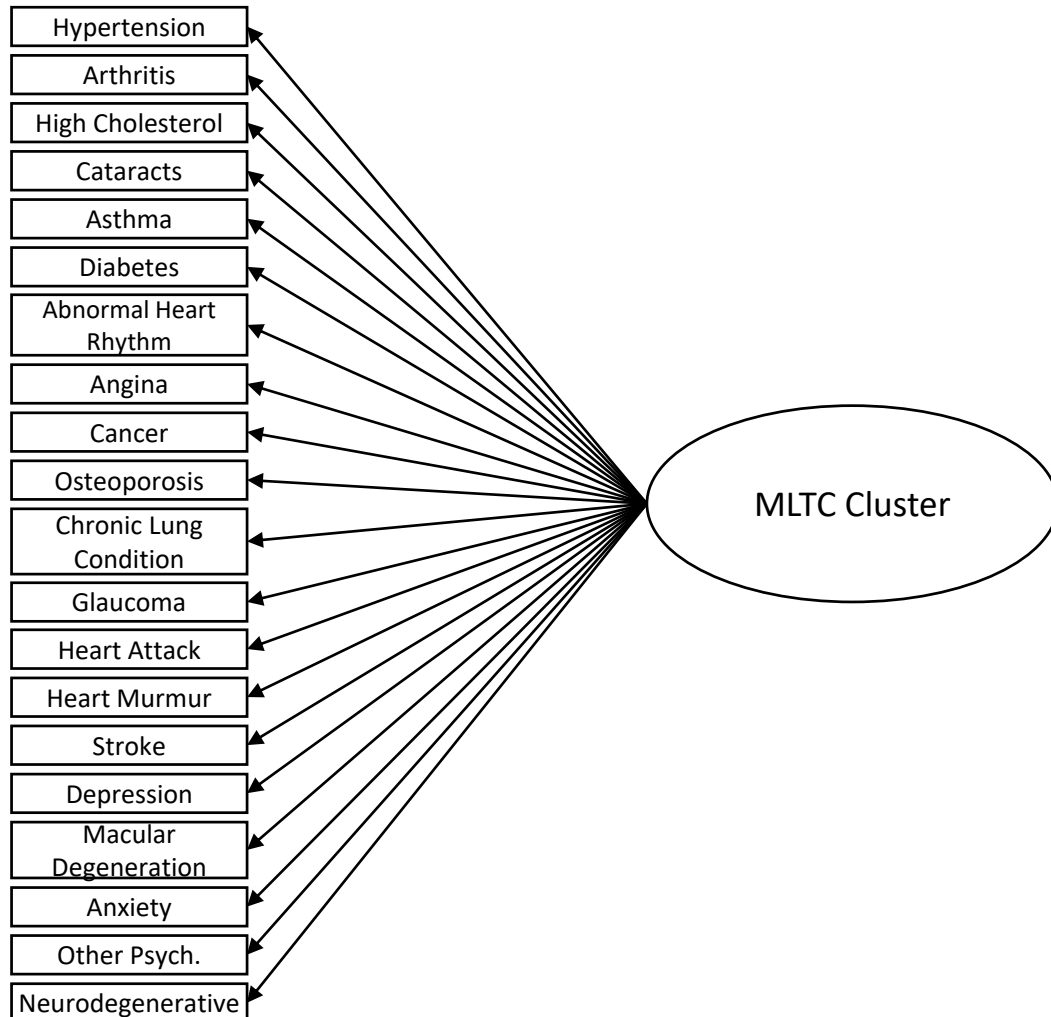

- Underlying latent class (cluster) which drives the development of observed variables (LTCs)

# Latent Class Analysis

- Underlying latent class (cluster) which drives the development of observed variables (LTCs)
- Popular person-centred approach in MLTC research (40+ studies since 2020)

# Latent Class Analysis

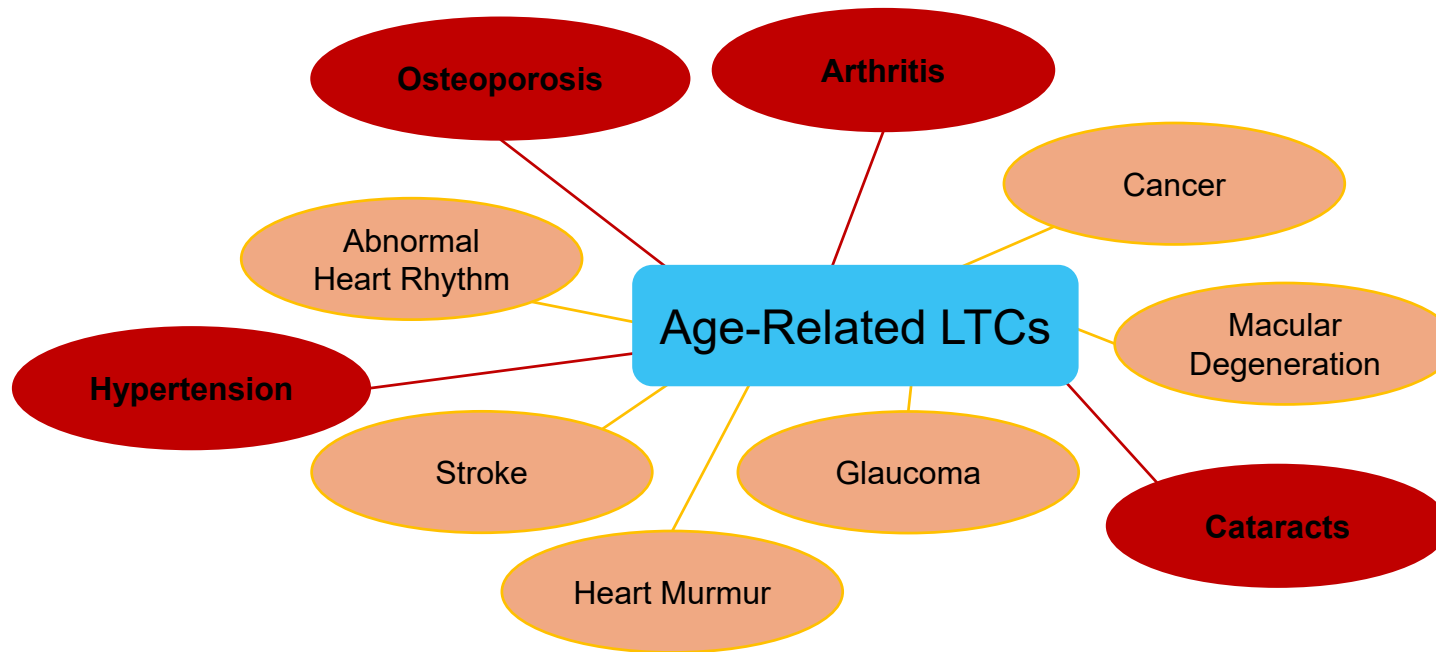

- Underlying latent class (cluster) which drives the development of observed variables (LTCs)
- Popular person-centred approach in MLTC research (40+ studies since 2020)
- Interpret clusters using probabilities (condition and person)  
... somewhat subjective

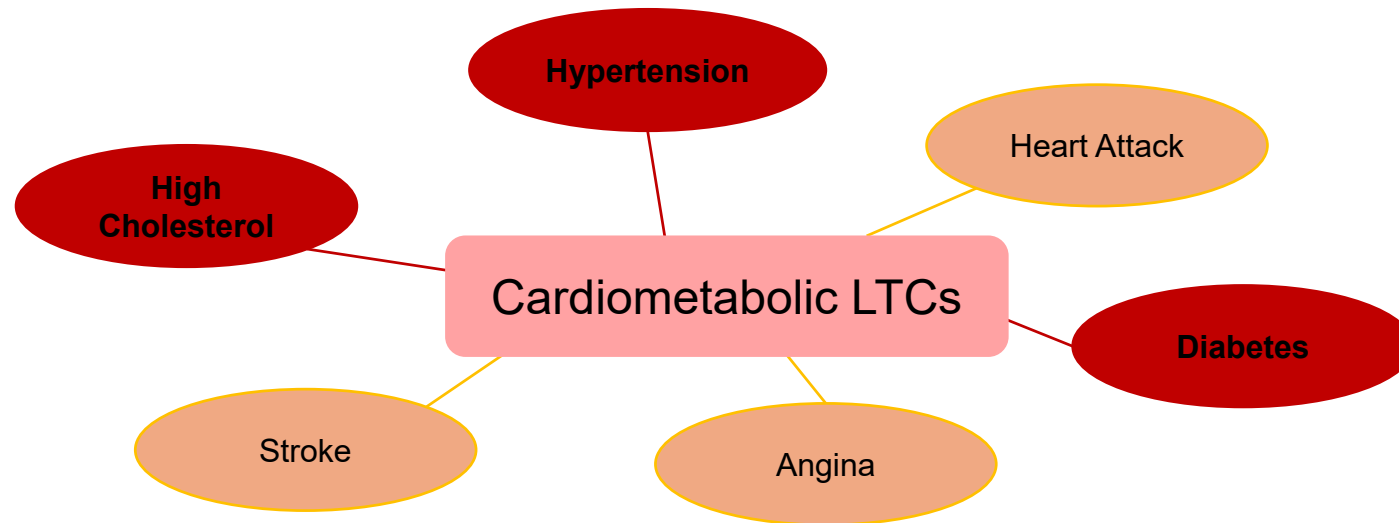

# MLTC Clusters

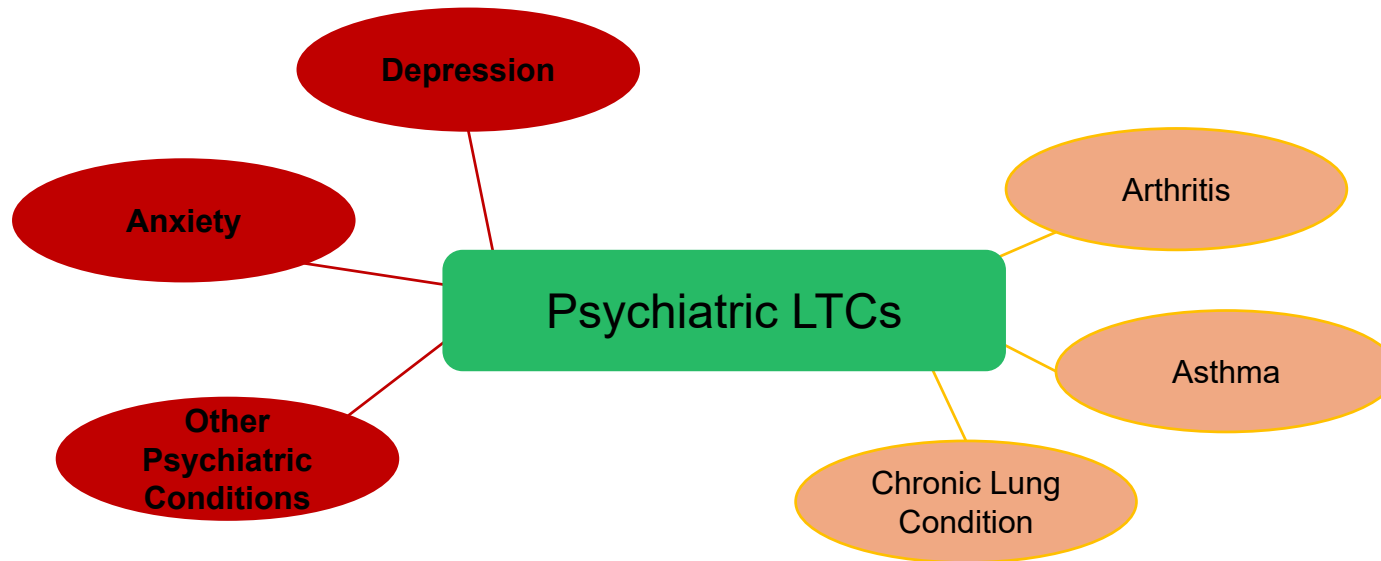

# MLTC Clusters

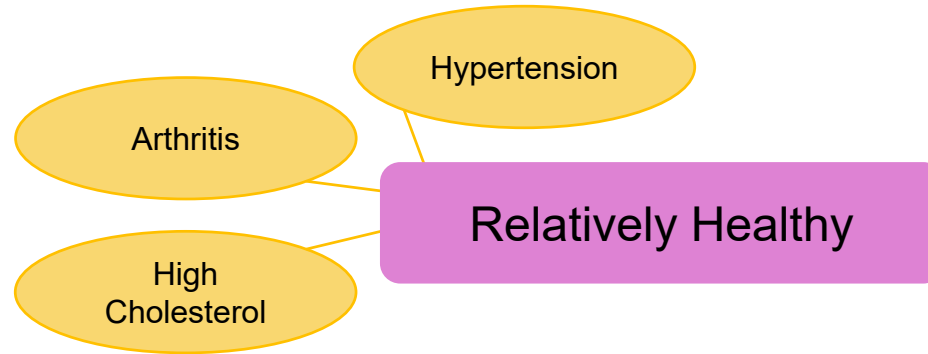

# MLTC Clusters

# MLTC Clusters

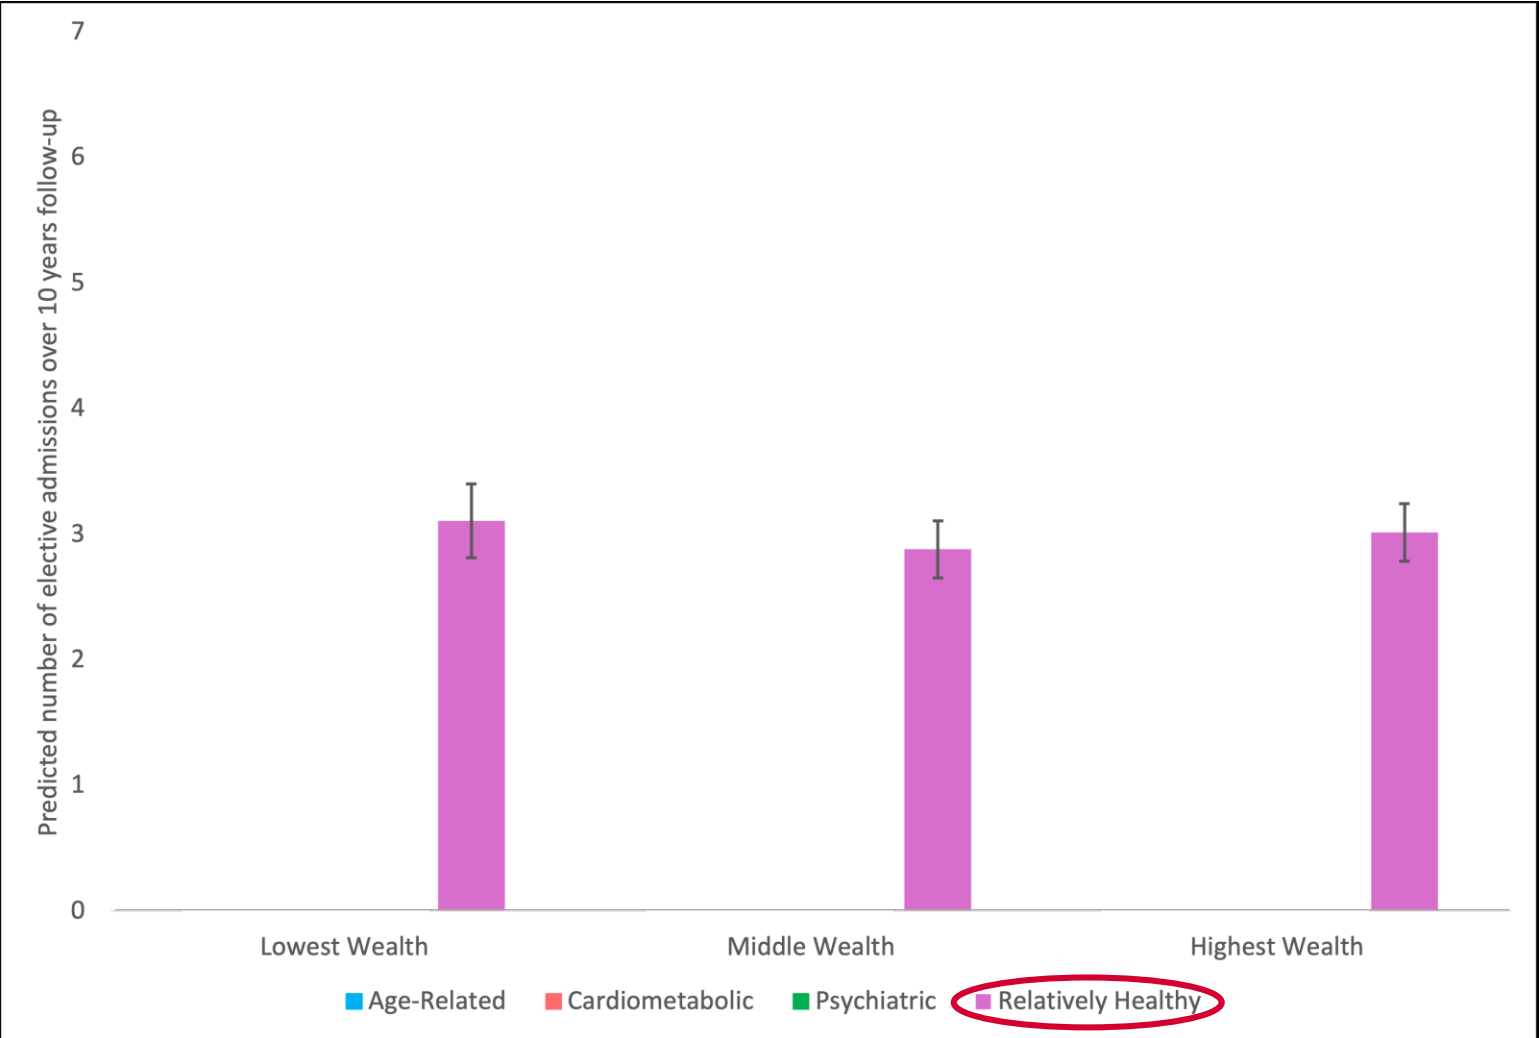

# MLTC Clusters

# **Multiple Cardiometabolic LTCs - Hospital Admissions and Mortality**

Predicted number of **ELECTIVE** admissions over  
follow-up stratified by wealth group

# Predicted number of **ELECTIVE** admissions over follow-up stratified by wealth group

\*Models adjusted for age, sex, ethnicity, education, cohabitation, smoking, physical activity

# Predicted number of **ELECTIVE** admissions over follow-up stratified by wealth group

\*Models adjusted for age, sex, ethnicity, education, cohabitation, smoking, physical activity

# Predicted number of **ELECTIVE** admissions over follow-up stratified by wealth group

\*Models adjusted for age, sex, ethnicity, education, cohabitation, smoking, physical activity

# Predicted number of **ELECTIVE** admissions over follow-up stratified by wealth group

Impact of MLTCs on elective admissions varies by wealth

Impact of MLTC clusters on elective admissions is reduced among highest wealth group

\*Models adjusted for age, sex, ethnicity, education, cohabitation, smoking, physical activity

Predicted number of **EMERGENCY** admissions over follow-up for MLTCs clusters and wealth

# Predicted number of **EMERGENCY** admissions over follow-up for MLTCs clusters and wealth

\*Models adjusted for age, sex, ethnicity, education, cohabitation, smoking, physical activity

# Predicted number of **EMERGENCY** admissions over follow-up for MLTCs clusters and wealth

\*Models adjusted for age, sex, ethnicity, education, cohabitation, smoking, physical activity

# Predicted number of **EMERGENCY** admissions over follow-up for MLTCs clusters and wealth

Impact of MLTC clusters on emergency admissions did not vary by wealth

All MLTC clusters ↑

Relatively healthy ↓

Lower wealth ↑

\*Models adjusted for age, sex, ethnicity, education, cohabitation, smoking, physical activity

# Main Takeaways

# Main Takeaways

1. MLTCs are rule rather than the exception among older adults

# Main Takeaways

1. MLTCs are rule rather than the exception among older adults
2. The challenges of MLTCs are unique... We need to consider how conditions are interacting with each other and wider social factors

# Main Takeaways

1. MLTCs are rule rather than the exception among older adults
2. The challenges of MLTCs are unique... We need to consider how conditions are interacting with each other and wider social factors
3. MLTCs are not random, common clusters have been found across studies

# Main Takeaways

1. MLTCs are rule rather than the exception among older adults
2. The challenges of MLTCs are unique... We need to consider how conditions are interacting with each other and wider social factors
3. MLTCs are not random, common clusters have been found across studies
4. Evidence of potential inequality in the impacts on elective admissions

# Main Takeaways

1. MLTCs are rule rather than the exception among older adults
2. The challenges of MLTCs are unique... We need to consider how conditions are interacting with each other and wider social factors
3. MLTCs are not random, common clusters have been found across studies
4. Evidence of potential inequality in the impacts on elective admissions
5. BUT there are limitations... We need more research to understand mechanisms

# Main Takeaways

1. MLTCs are rule rather than the exception among older adults
2. The challenges of MLTCs are unique... We need to consider how conditions are interacting with each other and wider social factors
3. MLTCs are not random, common clusters have been found across studies
4. Evidence of potential inequality in the impacts on elective admissions
5. BUT there are limitations... We need more research to understand mechanisms
6. It's a *long-term* process... Think about how inequality can arise throughout development, primary care management and secondary care outcomes

Thanks for listening!

Feel free to email any questions or comments 😊
