# Latent class analysis: segmentation

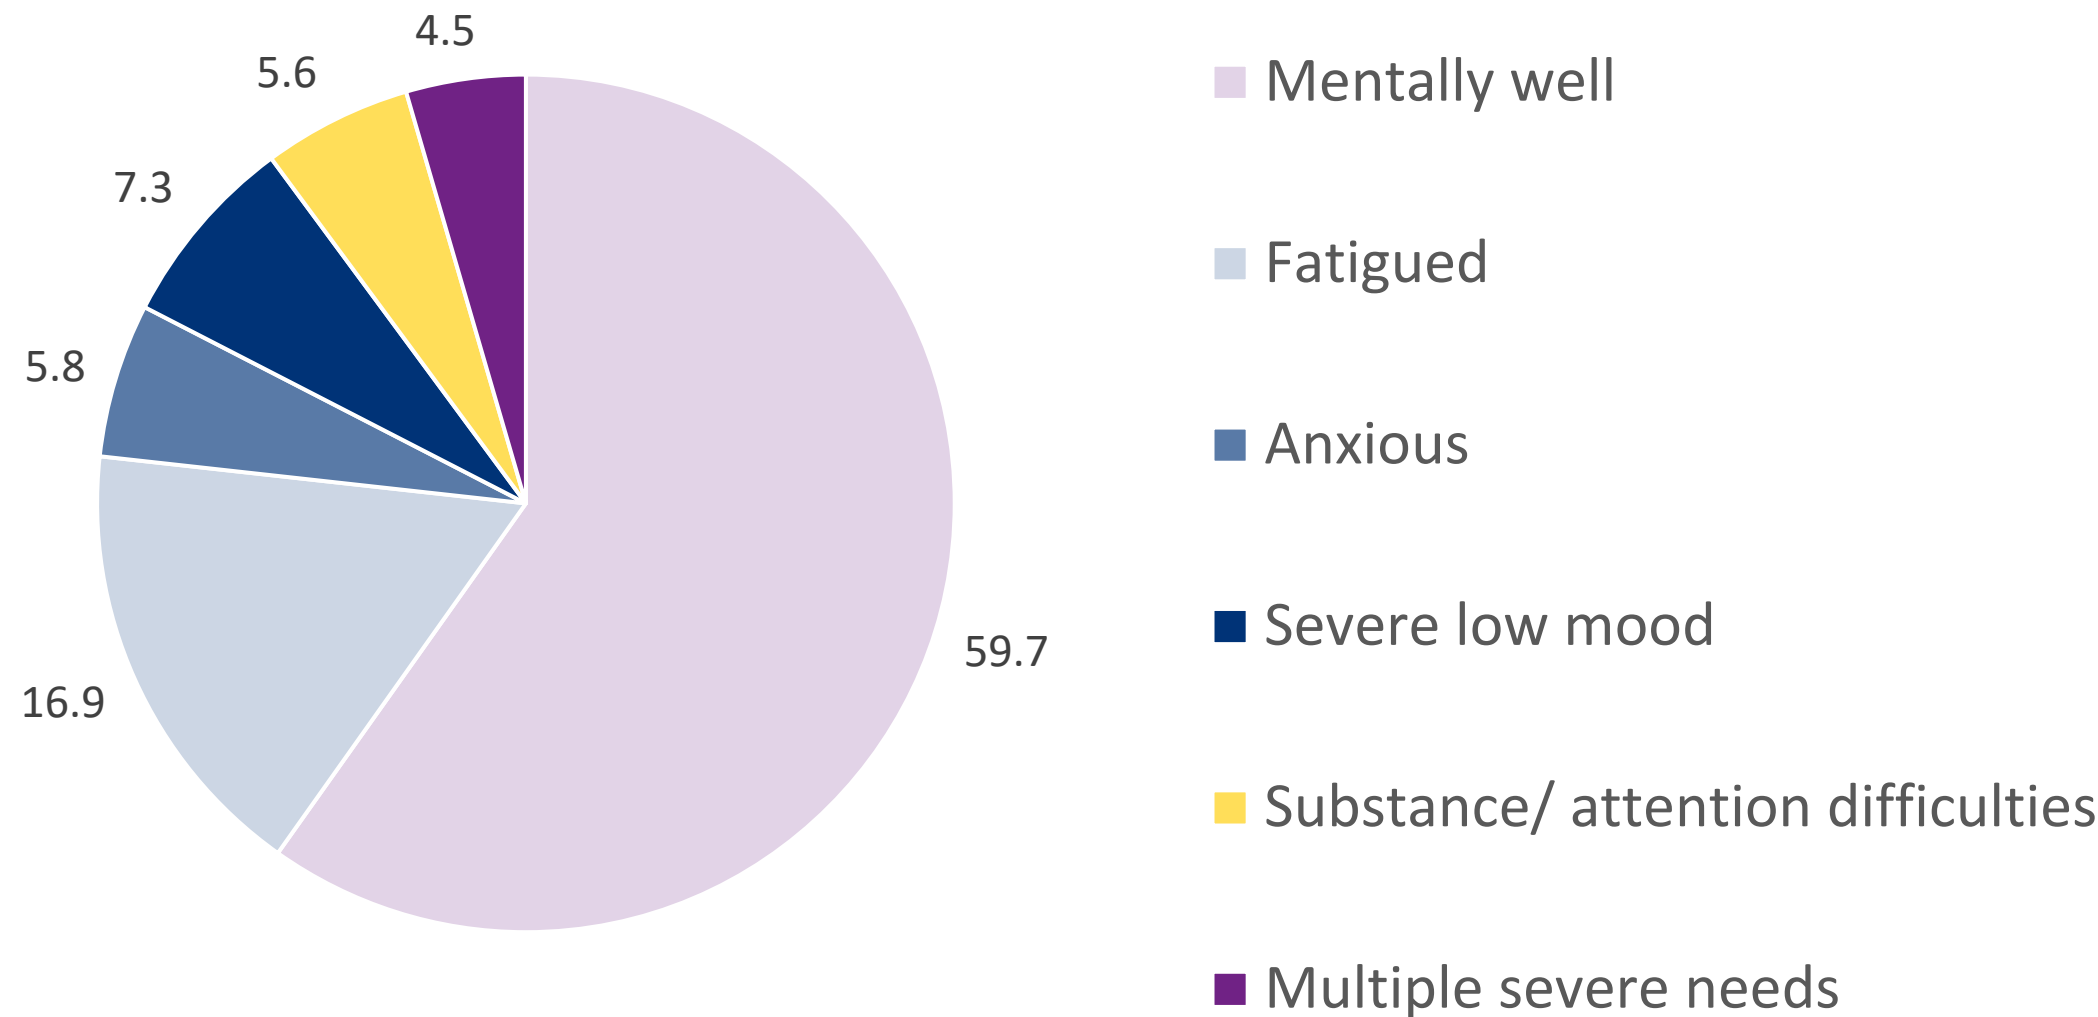

# Indicators added to the typology model

- Fatigue
- Concentration/forgetfulness
- Sleep problems
- Depressive ideas
- Irritability
- Worry
- Anxiety/phobias/panic
- Obsessions/compulsions
- Somatic symptoms
- Post traumatic stress disorder
- Bipolar disorder
- Psychosis
- Attention-deficit/hyperactivity disorder
- Autistic traits
- Eating disorder (self-identified)
- Drug dependence
- Alcohol harmful use/dependence

# Adult population typology: six groups

## 'Fatigued'

- 17% of adults
- ~2 indicators present
- 76% fatigue
- 50% sleep problems
- Irritability, worry
- CIS-R score: 7

One in four

- Four distinct groups
- Similar size

## **'Anxious'**

- 6% of population
- ~4 indicators present
- Worry (89%)
- Anxiety, phobia, panic (65%)
- Obsessive/compulsive (46%)
- Some depressive/sleep/fatigue
- CIS-R score: 12

### **‘Severe low mood’**

- 7% of population
- ~6 indicators present
- Fatigue (97%)
- Sleep problems (73%)
- Depressive ideas (66%)
- Concentration/forgetfulness (58%)
- Worry (76%)
- Some anxiety and irritability
- CIS-R score: 18

### **‘Substance/attention difficulties’**

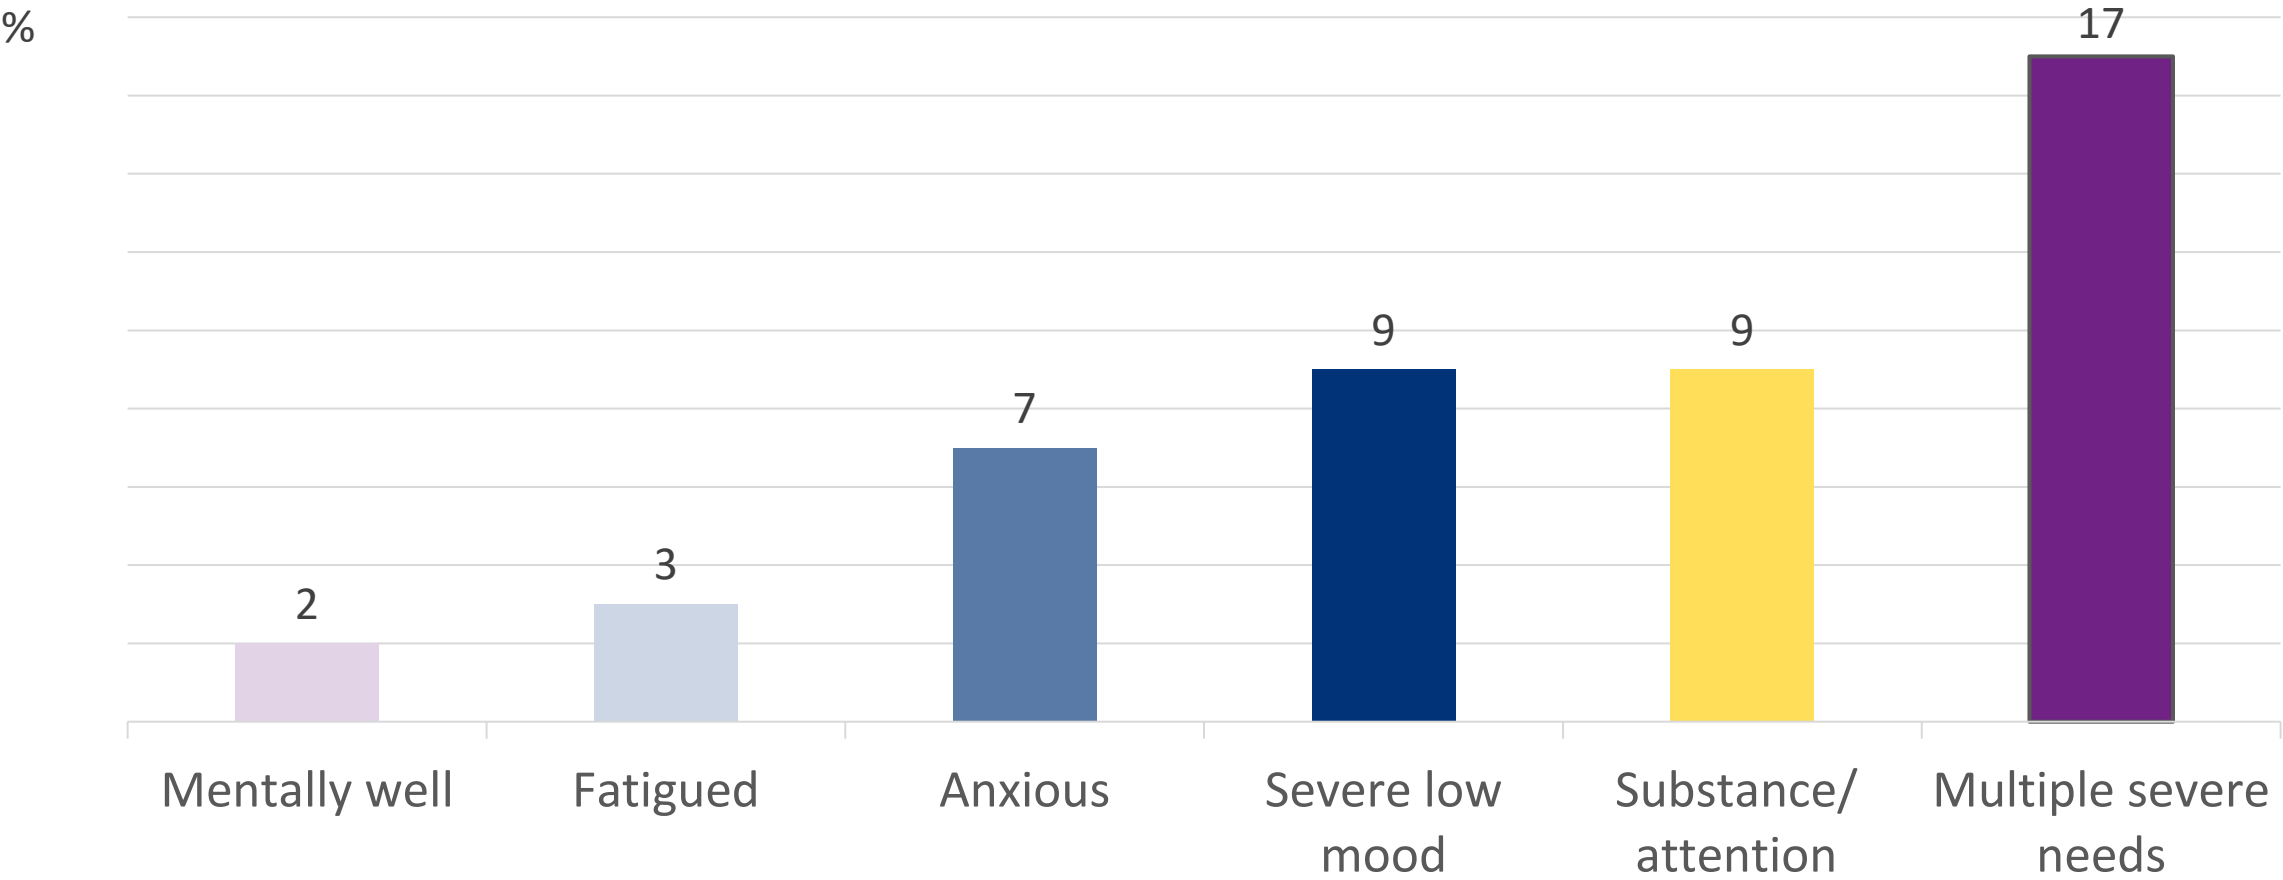

- 6% of population
- 3 or 4 indicators present
- Alcohol (49%)
- Drug dependence (28%)
- ADHD (46%)
- CIS-R score: 6
- Concentration/forgetfulness
- Obsessive/compulsive

### **‘Multiple severe needs’**

- 5% of population
- ~10 indicators present
- CIS-R score: 27
- PTSD (84%)
- Psychosis (29%)
- Bipolar (33%)
- Autistic traits (29%)
- Eating disorder (15%)
- ADHD (63%)
- Drug (13%), Alcohol (34%)

Proportion in each group: **ever been homeless**

# Proportion in each group: **sexual abuse in childhood**

# Patterning of mental health needs and support in England

Latent class analysis of the  
Adult Psychiatric Morbidity Survey

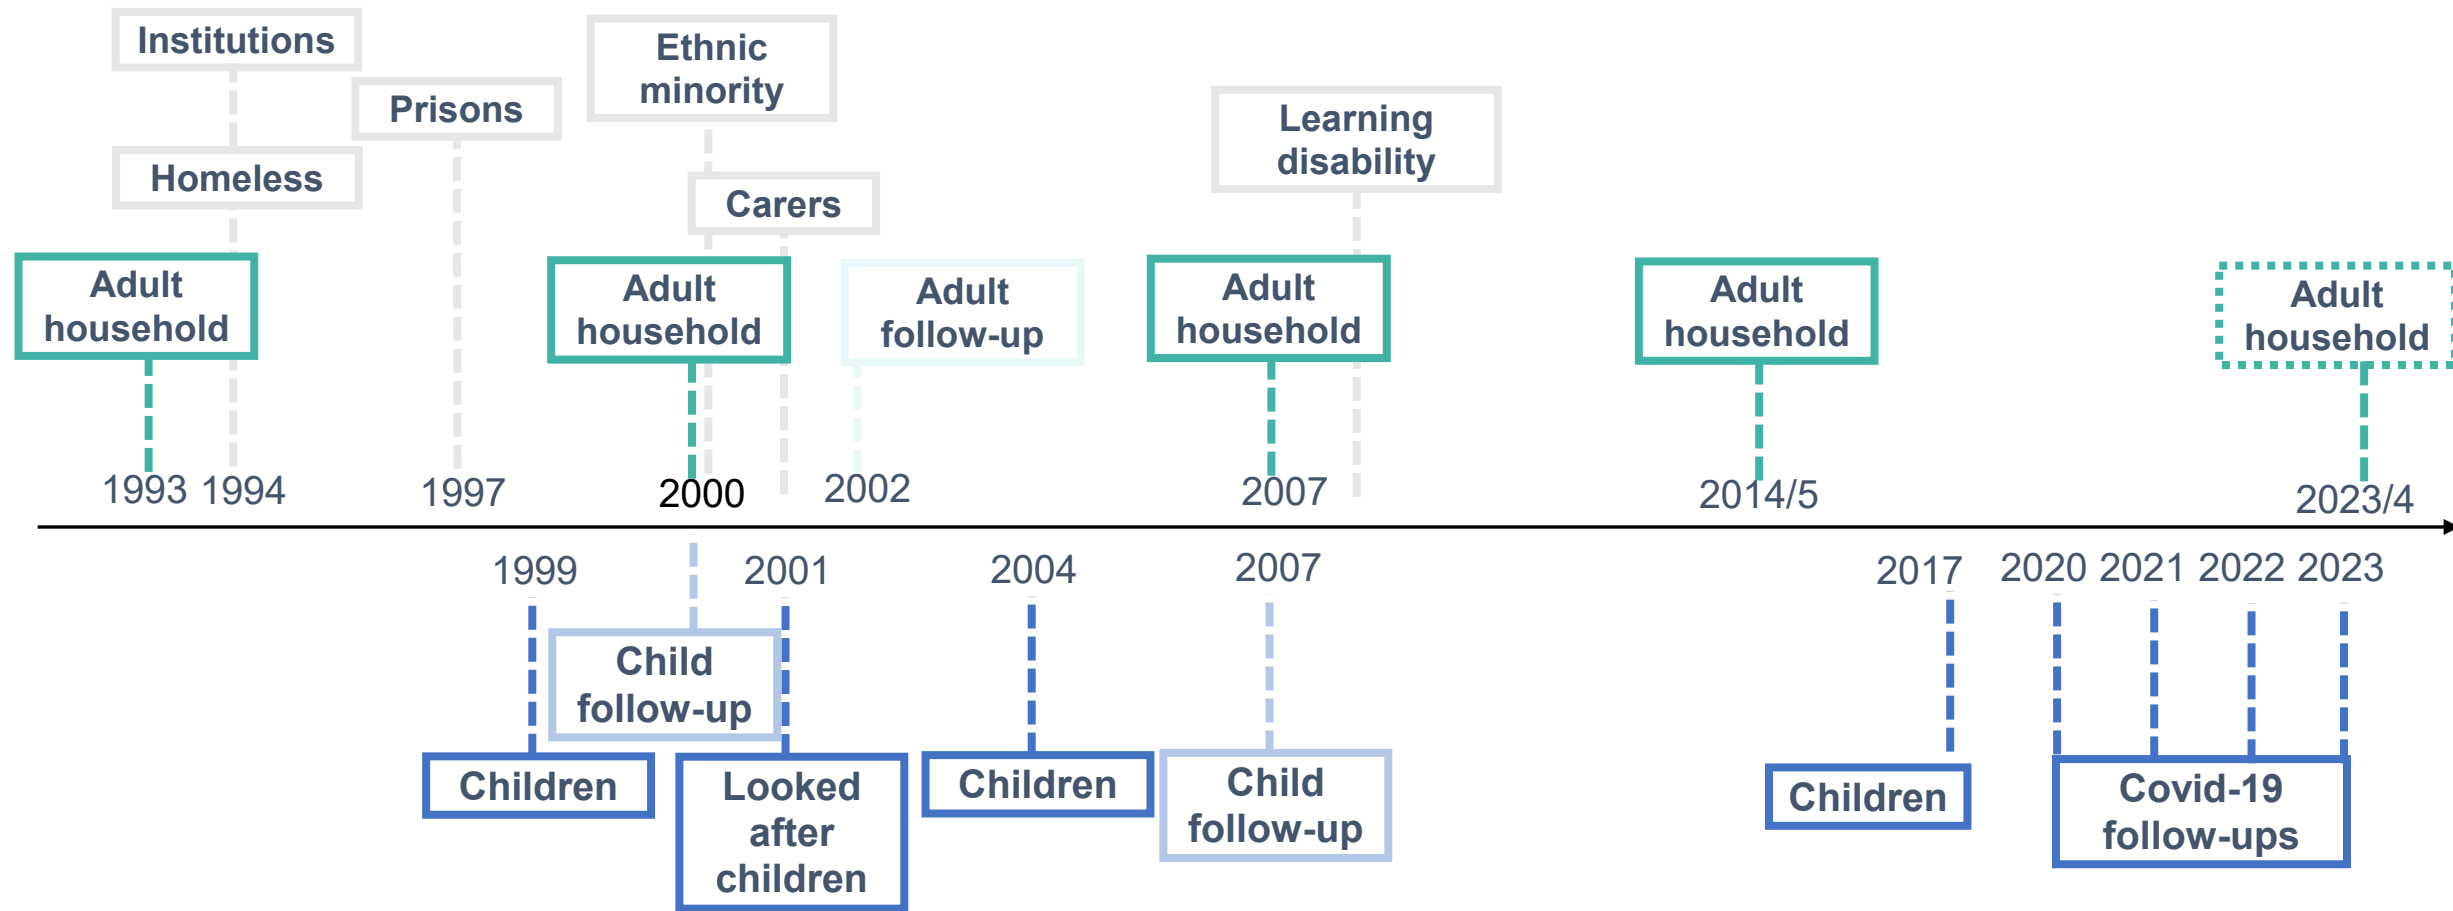

One in four – plus fatigued

Distinct mental health groups emerge

- **Anxious:** employed, 'good' health - worry, anxiety, panic
- **Severe low mood:** older/midlife, female, isolated, half get no health services
- **Substance/attention:** young, male, more unemployed, almost entirely missed by services
- **Multiple needs:** trauma, poverty, higher suicide risk

# National surveys of child and adult mental health in England

# Trends by DAWBA-assessed disorder type, 5-15 year olds in England

Based on child, parent, teacher report and clinical consensus rating using the DAWBA. 5-15 year olds living in England, MHCYP.

**Mental Health of Children and Young People in England, 2017**  
Summary of key findings

Information and technology  
for better health and care

November 2018

## Indicators of mental health difficulties entered into the LCA model

### **Strengths and Difficulties Questionnaire (SDQ):**

#### **Problem domains**

Emotional difficulties

Conduct difficulties

Attention difficulties

Peer problems

#### **Strength domain**

Prosocial behaviours

### **Warwick Edinburgh Mental Wellbeing Scale**

Low wellbeing

### **Rosenberg Self-Esteem Scale**

Low self-esteem

### **Self-harm**

Ever self-harmed

Child population typology: four groups

## Child population typology: four groups

■ Mentally well (now)

■ Attention difficulties (mainly)

■ Emotional difficulties (mainly)

■ Multiple difficulties

## Child population typology: four groups

### **'Mentally well'**

99%	prosocial
4%	peer problems
6%	low wellbeing
4%	hyperactivity disorder
3%	emotional disorder
3%	ever self-harmed

# Child population typology: four groups

## 'Attention difficulties'

- 54% hyperactivity
- 48% peer problems
- 38% conduct problems
- 34% low wellbeing
- 30% emotional disorder
- 23% ever self-harmed
- 8% low self-esteem

# Child population typology: four groups

## ‘Emotional difficulties’

- 81% low self-esteem
- 70% low wellbeing
- 43% emotional disorder
- 34% self-harmed
- 20% peer problems

## Child population typology: four groups

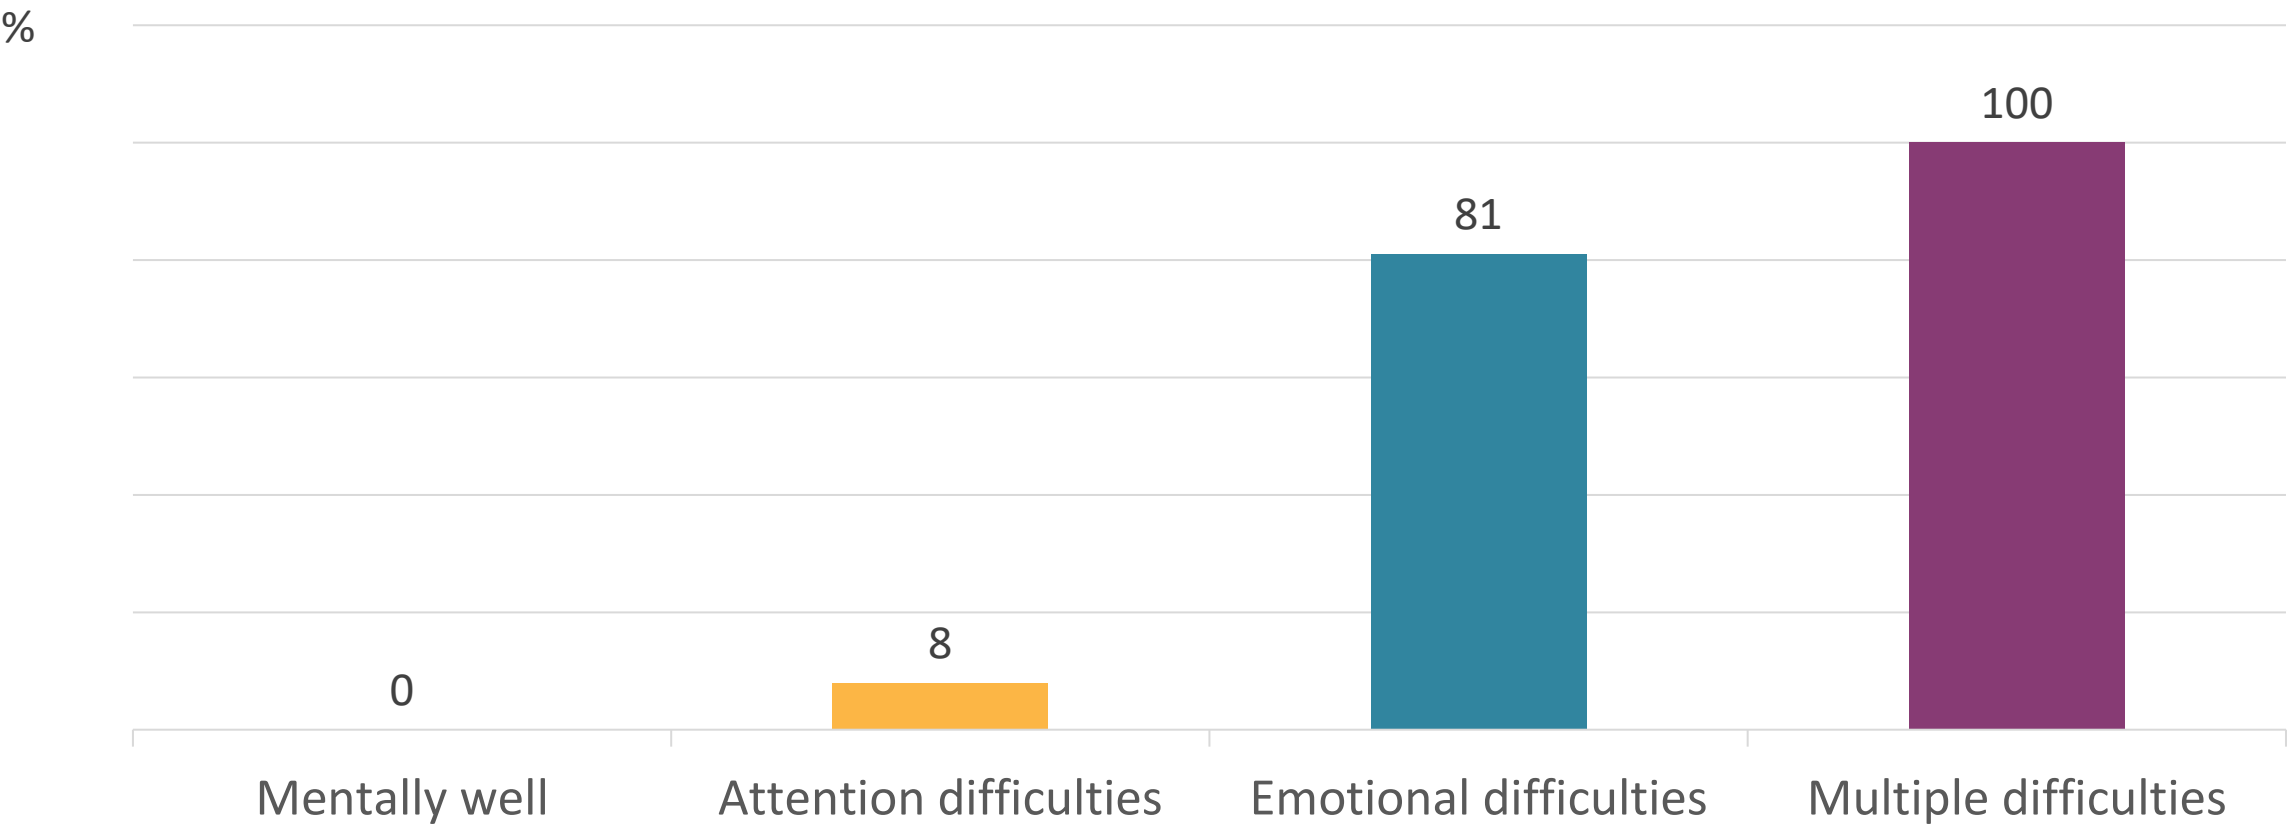

### **‘Multiple difficulties’**

100%	low self-esteem
99%	low wellbeing
87%	emotional disorder
71%	peer problems
58%	hyperactivity disorder
53%	self-harmed
31%	conduct disorder

# Proportion of young people in each group: **with low self-esteem**

# Proportion of young people in each group: **hyperactivity**

# Proportion of young people in each group: **who have self-harmed**

## Proportion of young people in each group: **by age**

## Proportion of young people in each group: **by age**

Proportion of young people in each group:  
**with recognized special educational needs**

Proportion of young people in each group:  
**whose parents had serious mental health difficulties**

## Proportion of young people in each group: **ever tried drugs**

Proportion of young people in each group:  
**ever excluded from school**

## Proportion of young people in each group: **contact with professional support**

# 11-19 year olds in England...

**Attention difficulties:** 10%, struggling parents, deprived neighbourhoods, SEN, school exclusion, low levels of informal and professional support

**Emotional difficulties:** 8%, female, older, less socioeconomic disadvantage, substance use, trauma, support seeking.

**Multiple difficulties:** 4%, older, poor health, SEN, deprived neighbourhoods, struggling parents, substance use, trauma, low school engagement, low level of support given high need.
